Hydrogen-Future Fuel-A Bibliography (With Emphasis on Cryogenic Technology)

NATIONAL BUREAU OF STANDARDS

The National Bureau of Standards[1] was established by an act of Congress March 3, 1901. The Bureau's overall goal is to strengthen and advance the Nation's science and technology and facilitate their effective application for public benefit. To this end, the Bureau conducts research and provides: (1) a basis for the Nation's physical measurement system, (2) scientific and technological services for industry and government, (3) a technical basis for equity in trade, and (4) technical services to promote public safety. The Bureau consists of the Institute for Basic Standards, the Institute for Materials Research, the Institute for Applied Technology, the Institute for Computer Sciences and Technology, and the Office for Information Programs.

THE INSTITUTE FOR BASIC STANDARDS provides the central basis within the United States of a complete and consistent system of physical measurement; coordinates that system with measurement systems of other nations; and furnishes essential services leading to accurate and uniform physical measurements throughout the Nation's scientific community, industry, and commerce. The Institute consists of a Center for Radiation Research, an Office of Measurement Services and the following divisions:

Applied Mathematics — Electricity — Mechanics — Heat — Optical Physics — Nuclear Sciences[2] — Applied Radiation[2] — Quantum Electronics[3] — Electromagnetics[3] — Time and Frequency[3] — Laboratory Astrophysics[3] — Cryogenics[3].

THE INSTITUTE FOR MATERIALS RESEARCH conducts materials research leading to improved methods of measurement, standards, and data on the properties of well-characterized materials needed by industry, commerce, educational institutions, and Government; provides advisory and research services to other Government agencies; and develops, produces, and distributes standard reference materials. The Institute consists of the Office of Standard Reference Materials and the following divisions:

Analytical Chemistry — Polymers — Metallurgy — Inorganic Materials — Reactor Radiation — Physical Chemistry.

THE INSTITUTE FOR APPLIED TECHNOLOGY provides technical services to promote the use of available technology and to facilitate technological innovation in industry and Government; cooperates with public and private organizations leading to the development of technological standards (including mandatory safety standards), codes and methods of test; and provides technical advice and services to Government agencies upon request. The Institute consists of a Center for Building Technology and the following divisions and offices:

Engineering and Product Standards — Weights and Measures — Invention and Innovation — Product Evaluation Technology — Electronic Technology — Technical Analysis — Measurement Engineering — Structures, Materials, and Life Safety[4] — Building Environment[4] — Technical Evaluation and Application[4] — Fire Technology.

THE INSTITUTE FOR COMPUTER SCIENCES AND TECHNOLOGY conducts research and provides technical services designed to aid Government agencies in improving cost effectiveness in the conduct of their programs through the selection, acquisition, and effective utilization of automatic data processing equipment; and serves as the principal focus within the executive branch for the development of Federal standards for automatic data processing equipment, techniques, and computer languages. The Institute consists of the following divisions:

Computer Services — Systems and Software — Computer Systems Engineering — Information Technology.

THE OFFICE FOR INFORMATION PROGRAMS promotes optimum dissemination and accessibility of scientific information generated within NBS and other agencies of the Federal Government; promotes the development of the National Standard Reference Data System and a system of information analysis centers dealing with the broader aspects of the National Measurement System; provides appropriate services to ensure that the NBS staff has optimum accessibility to the scientific information of the world. The Office consists of the following organizational units:

Office of Standard Reference Data — Office of Information Activities — Office of Technical Publications — Library — Office of International Relations.

AUTHOR INDEX 107

HYDROGEN-FUTURE FUEL - A BIBLIOGRAPHY (WITH EMPHASIS ON CRYOGENIC TECHNOLOGY)

N. A. Olien and S. A. Schiffmacher

This NBS Technical Note is a compilation of references dealing directly and indirectly with the possible future use of hydrogen as a fuel. The references were selected using an automated information system operated by the Cryogenic Data Center. This bibliography of references emphasizes the use of cryogenic technology in the hydrogen field. Articles are indexed under 40 subject headings and an author index is included. Over 1600 references are included in this bibliography.

Key words: Cryogenic technology; data; energy; fuel; hydrogen; hydrogen properties; LNG/SNG; production; safety; storage

INTRODUCTION

The Cryogenic Data Center was established in 1958 to assist the staff of the Cryogenics Division, other organizations within the National Bureau of Standards, other government agencies and private industry, in keeping up with the flood of information in this multidisciplinary field.[1,2] The field of cryogenics is, after all, defined by a temperature range rather than by subject or discipline. As time has gone on it has been necessary to reassess, on several occasions, the breadth of information being entered into the Cryogenic Data Center's Information System. This has been necessary because cryogenics is a growing field and with a relatively constant staff it has

not been possible to keep up with the corresponding growth in the literature. Decisions regarding which areas can be covered to less depth and those requiring expansion of our efforts have always been made in concert with the staff of the NBS-Cryogenics Division and other technical people in the cryogenics industry. The last major redirection took place in early 1973. The result was a net change of about 25 percent in our coverage of the current literature in order to adequately cover the field encompassed by the present bibliography. We also began publishing a quarterly titled Hydrogen-Future Fuel which is issued each August, November, February and May.[3] The quarterly and this publication utilize the Data Center's Information System as the source of the references contained in each. These efforts within the Cryogenic Data Center were done in concert with a much larger effort in other sections of the NBS-Cryogenics Division. These efforts were concerned with production, storage, applications, materials compatibility, metrology, transmission and other systems involving cryogenic hydrogen. The results of these efforts will be summarized in a National Bureau of Standards Special Publication to be published in 1975.

One other effort of the Cryogenics Division bearing on the subject of cryogenic hydrogen should be mentioned at this point. Since late 1972 the Cryogenic Data Center has been locating, cataloging,

and abstracting all available documents dealing directly and indirectly with hydrogen safety. This work has been sponsored by the National Aeronautics and Space Administration's Aerospace Safety Research and Data Institute (ASRDI) at the Lewis Research Center, Cleveland, Ohio. The aim has been to supply input information for a large on-line information bank which will serve as a national resource with regard to aerospace safety. We have also been engaged in preparing, during the past year, a hydrogen properties handbook, which will bring together in one publication all available data on hydrogen properties as well as giving recommended values. This document is in editorial review and will be published as a NASA Special Publication similar to one we prepared on oxygen a few years ago.[4]

We have tried to make the present publication as complete as possible, but we would appreciate additional references from any of our readers who may see an omission. As the title states, this publication emphasizes cryogenic hydrogen and as such is meant to complement rather than duplicate the bibliography edited by Cox.[5]

We plan to keep this bibliography current by means of future issues of Hydrogen-Future Fuel, the quarterly mentioned above. Comments or additions should be sent to the attention of the first author at:

Cryogenic Data Center
Institute for Basic Standards
National Bureau of Standards
Boulder, Colorado 80302

The bibliography lists the references under 40 subject headings. A given reference can be listed under more than one heading. The subject headings correspond with those used in the previously mentioned quarterly and will correspond to those of future issues of the same publication. A complete author index is also included.

NBS-114A (REV. 7-73)

U.S. DEPT. OF COMM. BIBLIOGRAPHIC DATA SHEET	1. PUBLICATION OR REPORT NO. NBS TN-664	2. Gov't Accession No.	3. Recipient's Accession No.

4. TITLE AND SUBTITLE

HYDROGEN-FUTURE FUEL - A BIBLIOGRAPHY (WITH EMPHASIS ON CRYOGENIC TECHNOLOGY)

5. Publication Date: February 1975

6. Performing Organization Code

7. AUTHOR(S)

N. A. Olien and S. A. Schiffmacher

8. Performing Organ. Report No.

9. PERFORMING ORGANIZATION NAME AND ADDRESS

NATIONAL BUREAU OF STANDARDS
DEPARTMENT OF COMMERCE
WASHINGTON, D.C. 20234

10. Project/Task/Work Unit No. 2750123

11. Contract/Grant No.

12. Sponsoring Organization Name and Complete Address (Street, City, State, ZIP)

Same as Item 9.

13. Type of Report & Period Covered

14. Sponsoring Agency Code

15. SUPPLEMENTARY NOTES

16. ABSTRACT (A 200-word or less factual summary of most significant information. If document includes a significant bibliography or literature survey, mention it here.)

This NBS Technical Note is a compilation of references dealing directly and indirectly with the possible future use of hydrogen as a fuel. The references were selected using an automated information system operated by the Cryogenic Data Center. This bibliography of references emphasizes the use of cryogenic technology in the hydrogen field. Articles are indexed under 40 subject headings and an author index is included. Over 1600 references are included in this bibliography.

17. KEY WORDS (six to twelve entries; alphabetical order; capitalize only the first letter of the first key word unless a proper name; separated by semicolons)

Cryogenic technology; data; energy fuel; hydrogen; hydrogen properties; LNG/SNG; production; safety; storage
